CARD-It should be generally known that A persons so unfortunate as to lose one or more of their teeth need not wait weeks and months for artificial substitutes and endure in-convenience, disagreeably changes in voice, fa-cial expression, &c., but may have artificial teeth made before and inserted immediately after extraction of their natural teeth. By this mode a better adaptation, a more pleasant ex-pression and a nearer approach toward preserving the natural harmony of the features are secured, and very much of the pain and difficulty experienced in learning to use teeth are also avoided. I have practiced this mode successfully for seven years, and having introduced it here, would be glad to refer any one interested to pstients who know of it from experience In treating the natural teeth my object is to preserve every one that time, patience and modern methods of treatment can save. The use of argenic in de-stroying exposed nerves is condemned by the more enlightened of the dental profession on account of its turning teeth dark, inducing abscess and finally the loss of the teeth. The nerve pulp, which is the source of life to the teeth, should always be treated, whon exposed, with a view to its restoration to health.
